

Recast ROHS Directive 2011/65/EU ROHS 2

Legacy Components is an independent distributor of electronic components and does not manufacture any of the components that it sells. Accordingly, Legacy Components is unable to represent or certify to our customers what materials are used in the manufacturing process of the components we provide for resale. Legacy Components is aware of the Recast ROHS Directive 2011/65/EU ROHS 2 compliance mandate that became effective July 21, 2011, and has gathered information about manufacturers and manufacturer's websites that may be useful to customers in determining component compliance. Information may include product status, dates of product compliance and data that may be available from the manufacturer to document compliance. As the process moves forward, websites and manufacturers' information provided to customers by Legacy Components are intended as possible research vehicles so customers may complete their due diligence and do not represent in any way a certification by Legacy Components as to the chemical content of any component.

Chemicals used in the components or the manufacturing of the components are selected and used at the sole discretion of the manufacturer and in many cases will be considered intellectual property. Certification of any chemical content is the sole responsibility of the manufacturer. Legacy Components does not add any of the ROHS 2 substances during its handling process of electronics components.

Legacy Components does certify that it will ship to the manufacturer the part and meet any date code restrictions as they appear on your purchase order. Upon request, Legacy Components will supply to the buyer information, if available, that a component may or may not be ROHS 2 compliant according to the manufacturer's website or data sheet.

If you have additional questions concerning Legacy Components' position on ROHS 2 compliance, please contact our Quality Department at 813-579-3330 or quality@legacycomponentsnow.com.
